**FUTURE  
IS ALREADY  
HERE**

As founders of ADECON, we are proud to offer comprehensive solutions for multimodal transportation to clients around the world. Our strong presence in Europe and extensive network of partners allow us to provide versatile and efficient logistics services. The company was founded in 2007 as a container trucking company, but has since grown into a professional logistics provider, offering a range of multifaceted solutions for global trade.

We are committed to meeting the changing needs of today's businesses and are always up for the challenge of finding creative and innovative solutions. Using specialized equipment and additional services helps us to bridge the gap between shippers and buyers, while managing the entire supply chain and offering a single point of contact for our clients ensures maximum service quality at optimal cost.

We understand the importance of individual attention to each order and have a flat organizational structure to ensure quick responses to client needs. Our team of highly qualified, experienced, and passionate professionals is dedicated to providing the best possible service. As owners, we are actively involved in the day-to-day operations of the business to guarantee superior quality in the services we provide.

Mr. Adrian Dolny  
President of the board

Mr. Cezary Ewertowski  
Vice-President of the board

# ADECON's BREAD & BUTTER

**Transportation of ADR goods is a particularly demanding process** that requires specialized knowledge, experience, and equipment. **ADR goods are dangerous substances such as chemicals, products hazardous to the environment and life**, radioactive materials, and even weapons and military materials. The movement of these goods **requires precise planning and reliable execution to prevent potential threats to people, environment, and infrastructure.**

Inappropriate transportation of these goods can lead to serious consequences such as explosions, fires, environmental contamination, and even death of people. That's why it's important to choose the most experienced players in the market who have the necessary knowledge and experience in the transportation of ADR goods.

By choosing the most experienced players, customers can be sure that their goods are safely and effectively transported in accordance with all safety regulations and standards. With the **necessary resources, knowledge, and experience, ADECON provides its customers with peace of mind** and confidence that their goods are in good hands.

- Asset based hazardous materials oriented logistics operator
- Highly qualified office /warehouse staff
- Truck drivers with ADR licenses including tanks & license to empty/fill tanks with hazardous materials
- Full-time DGSA
- Trucks with hazardous materials license (FL/EX III), also with dedicated RF-ISO tanks trailers
- Warehouses & depots designed to legally handle dangerous goods on the long-term basis

The issue of **temperature fluctuations and changing atmospheric conditions is very important**, especially in long-distance maritime transport. Cargo can **exceed various climate zones many times** over a period of ocean voyage. **Reefer containers are used to transport goods that require controlled temperatures, such as fruit, vegetables, fish and meat.**

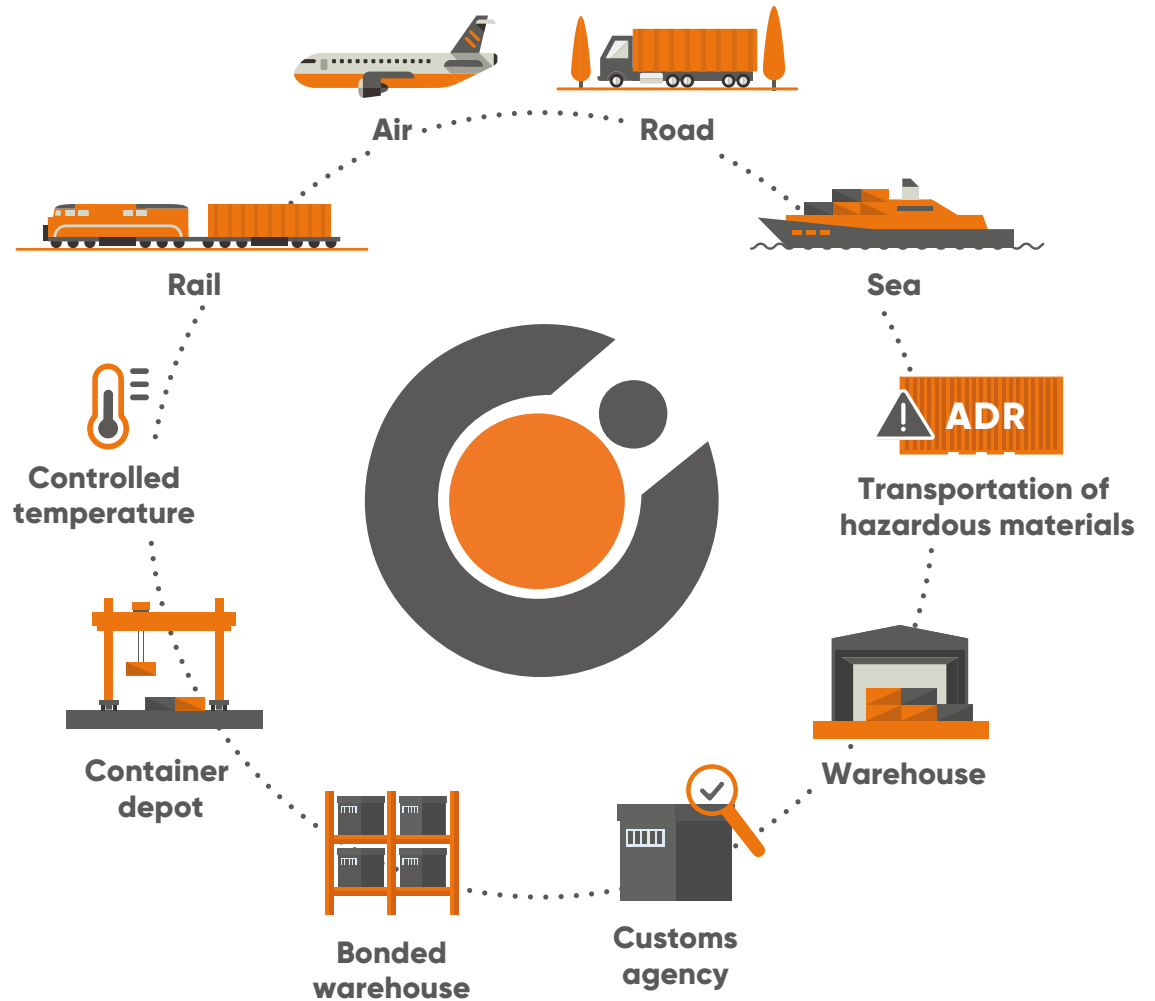

Container transport in controlled temperature mode is subject to strict security requirements, such as monitoring the temperature of goods at each stage by means of electronic devices.

**Transport at a controlled temperature requires continuity of the original temperature.** Therefore, the reefer container should be properly checked both before and during loading. It must be in good working order, dry, preferably odourless and in good general technical condition.

It is worth mentioning that apart from an appropriate temperature, it is very **important in the case of some goods, especially fresh fruit and vegetables, to set additional parameters concerning appropriate ventilation** or humidity level.

# GROW YOUR BUSINESS

we will take care  
of the logistics

# At **ADECON,** we believe...

that technical proficiency alone is not enough to meet our clients' needs. We strive to build strong, long-lasting relationships with our clients by gaining a thorough understanding of their business and providing tailored logistics solutions that support their success.

Our highly skilled and experienced team combines technical expertise with a deep understanding of the transportation industry to deliver a superior customer experience. We keep up with the latest advancements and innovations in the field to ensure our clients have access to the most effective solutions.

We take pride in being a top logistics provider, specializing in controlled temperature and hazardous material transportation. **With our own fleet of container trucks, warehouses, bonded facilities, container depots, and customs agencies, we are equipped to offer top-notch logistics services to our clients.** With our wide-ranging network of international partners, we are able to provide assistance to clients worldwide, utilizing transportation methods such as ocean, land, and air forwarding. Our proficient team possesses the expertise and resources necessary to manage even the most intricate and demanding projects.

## BY AIR

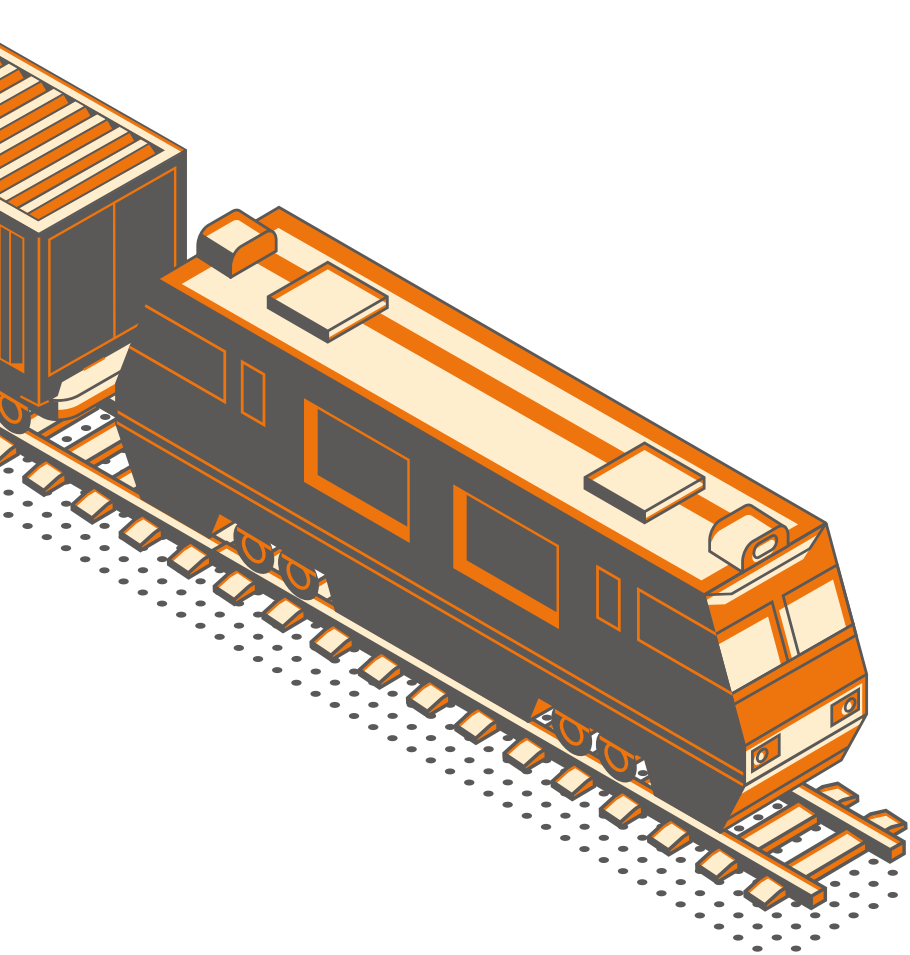

ADECON specializes in the handling of hazardous materials and has extensive experience in dealing with lithium-ion batteries, which are shipped under special permits according to ICAO. With our services, hundreds of tons of air cargo are shipped every year.

## BY SEA

Vast majority of cargo transports worldwide is being shipped using sea freight. In this field we specialize in reefer containers and haz-mat cargo. Team of forwarders and customs agents works extensively to support our customers with dedicated solutions.

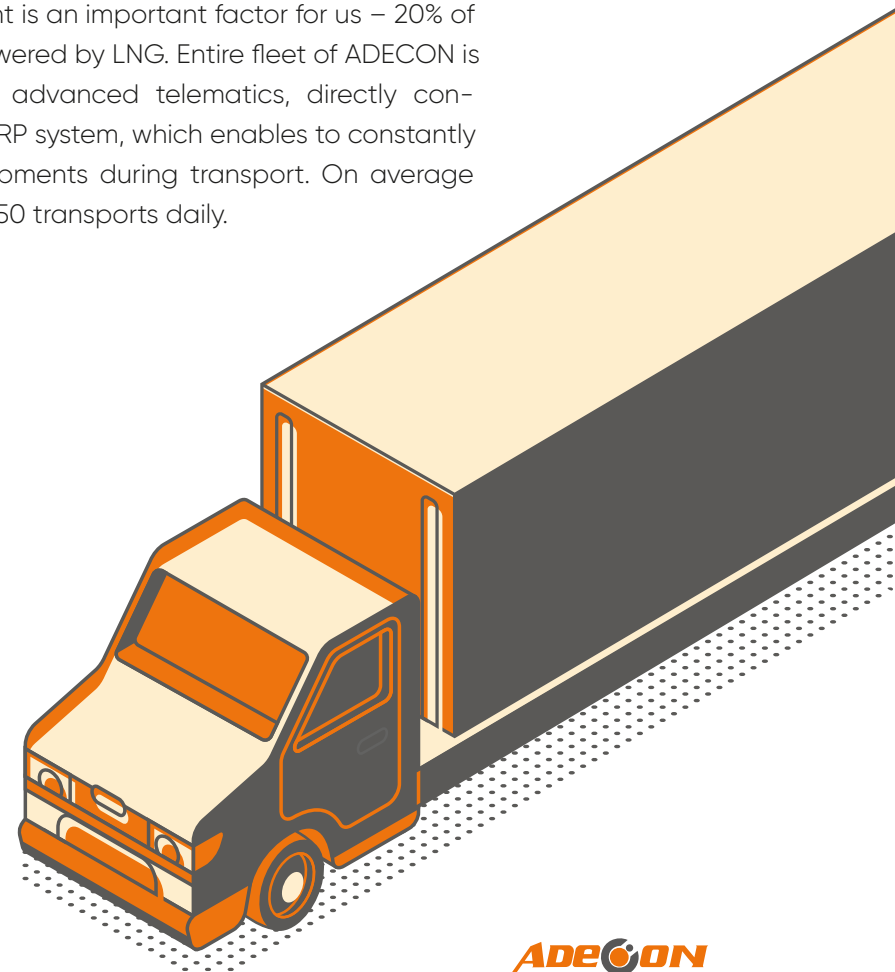

## BY RAIL

Perfect solution between sea and air transport for transports between Asia and Europe. It allows to transport cargo twice as fast as on the sea, much more cost effective than by air. We use this mode of transport for every reasonable case also for inner European transports to/from container terminals, thus minimizing the negative effect on the environment. Consolidation and deconsolidation of shipments for rail transport is being performed at our warehouse

## BY ROAD

Our fleet of trucks is being developed constantly. Carbon footprint is an important factor for us – 20% of our trucks is powered by LNG. Entire fleet of ADECON is equipped with advanced telematics, directly connected to our ERP system, which enables to constantly monitor our shipments during transport. On average we do around 150 transports daily.

# UNIQUE COMBINATION OF SUPPORTING SERVICES

- Bonded container depot
- Own fleet of around 100 reefer containers
- Container reach-stackers on site
- Reefers loaded/unloaded from truck, positioned at the depot and plugged to electricity to operate
- Expansion options to add more space and capacity

# Our 10000m<sup>2</sup>

independent inland container depot allows our customers to maximize the effectiveness of the intermodal supply chain. It's prepared to handle reefers and hazardous materials containers. Services provided cover handling of containers, short- and longterm storage, VGM. Repair and service of containers is also among our services. As an addition - a fleet of over 100 reefer containers is available for our customers

## WAREHOUSES

**Dębe near Kalisz (Poland, at the road 470,  
40km from A2 freeway) – Neutral and ADR  
Goods – Storage area of 3260 m<sup>2</sup>**

Warehouses located in Debe, near Kalisz are equipped with state-of-the-art solutions to streamline and automate their operations. We are committed to innovation in order to provide the highest level of service and in the best possible time. Among other things, we have a dedicated system of mobile racks with the use of semi-automatic shuttle pallet transporters. This is a unique method implemented in a hazardous materials warehouse, ensuring easy and safe access to goods with the advanced technology of the System Stow Atlas and preparation for ADR of all classes. In the facility there are also: a modern fire protection system and alarm system. They are responsible for the safety of the goods entrusted to us. On the premises there is also a 24h security service. The hall meets the highest requirements in the category of environmental protection (SEVESO)

# ADECON BATTERY WAREHOUSE

Poland, Ryszarda Chomicza 17,  
55-040 Bielany Wrocławskie,  
intersections of A8/S8/A4.

Specifically designed for storage of lithium-ion batteries and high-value goods, ensuring maximum safety and security for our clients.

## NEWLY BUILT

and just opened ADECON Battery Warehouse is intended to be used mainly **for lithium-ion (Li-Ion) batteries** – ADR Class 9-UN 3480.

## RACK SYSTEM

is equipped with sprinklers supported by **thermal imaging monitoring of all stored goods** (unique solution for battery storage)

## STORAGE AREA

**of 7020 m<sup>2</sup> – including 3500m<sup>2</sup> with rack system.** The whole area of 7020 m<sup>2</sup> can be easily adjusted and equipped with rack system.

## INNOVATION

each pallet space is equipped with thermal imaging monitoring to detect deviations in battery temperature as early as possible and react before potential risks appear.

# CUSTOMS CLEARANCE AGENCY

---

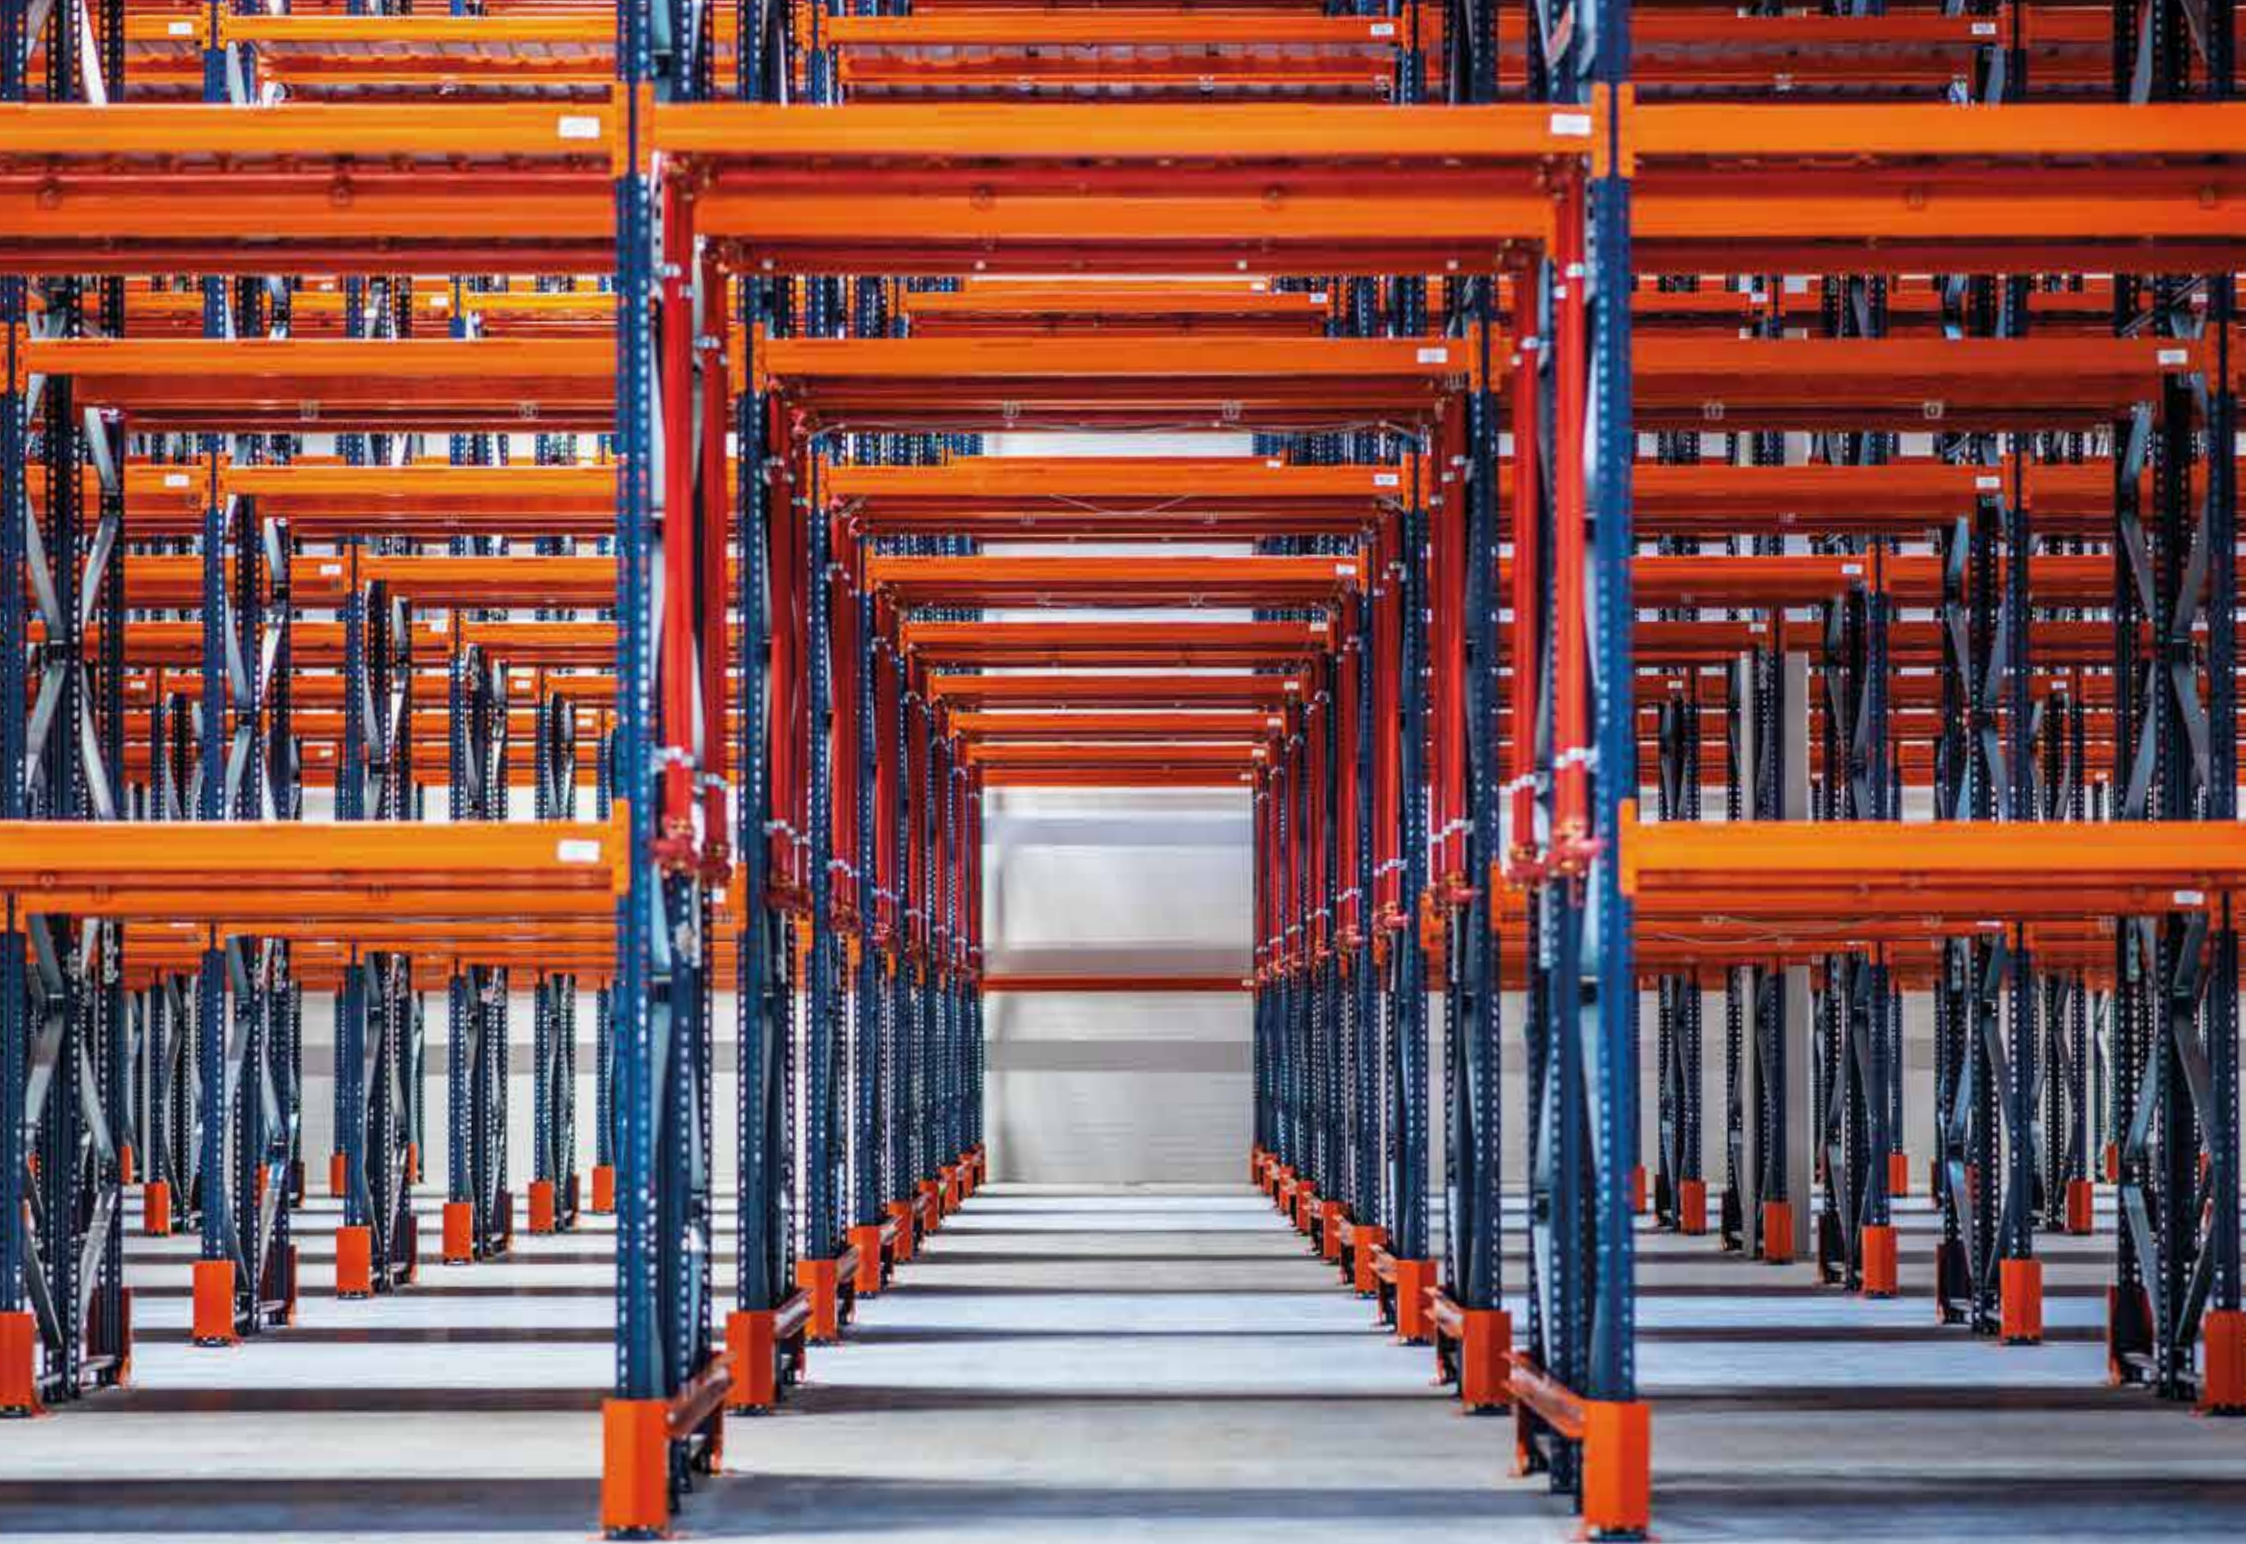

Customs agencies in Hamburg and Gdynia offer complex customs duties solutions for import and exports. Customs Office in Gdynia AEO Permit: PLAEOC390000180095

## BONDED WAREHOUSE

---

Bonded warehouse functionality is fully operational to both closed warehouse facility (for palletized cargo) as well as for our bonded container depot (for full sea containers).

# E MOBILITY

**The issue:** The development and production of electric vehicles (EVs) requires a change in the sourcing of raw materials, the implementation of new components, and the adherence to new standards, particularly in regards to batteries and fast-charging infrastructure. Ensuring seamless integration and reducing the risk of disruptions within the eMobility supply chain is crucial.

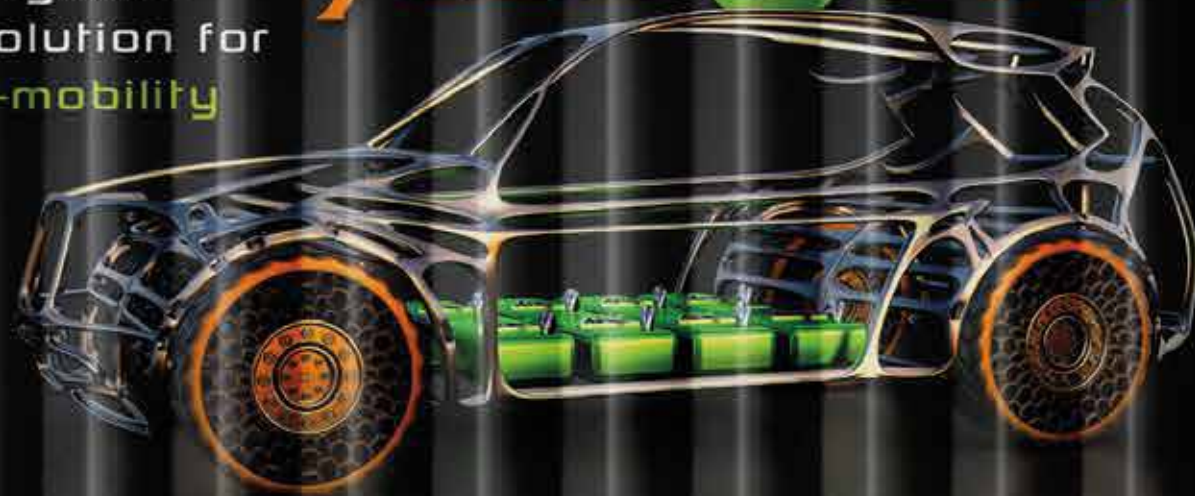

**The answer:** Addressing shortages and bottlenecks, particularly in the extraction and processing of raw materials, is key. Standardization will lower the costs of both R&D and production. By working together, organizations can create a supply chain that is efficient, robust, and mutually beneficial.

ADECON offers raw materials & finished goods logistics services for battery manufacturers (also by VMI model) including hazardous substances such as electrolyte with optional controlled temperature storage and transport.

Tailored  
Logistics  
Solution for  
e-mobility

ADECON

In recent years, the e-mobility industry has been developing at a tremendous pace both in Poland and around the world, as evidenced by the increasing number of cars with distinctive green license plates on city streets. Not everyone is aware of the important role Poland plays in the development of this industry. Our country is the largest supplier of lithium-ion car batteries in Europe, thanks to LG Energy Solution near Wro-

claw, which is the world's leading producer of batteries for electric cars. LG has attracted to Poland, among others, Asian electrolyte producers who not only import raw materials but also build factories in our country. What is electrolyte? An electrolyte is a liquid solution that enables the flow of electric current, making it essential to the generation and transmission of a certain voltage and amperage in a car battery.

DEDICATED

**SOLUTIONS**

Storage on wheels

Controlled temperature

High-specialized infrastructure

Last-mile Logistics

**Suppliers of electrolyte are interested in a stable but also flexible supply chain** of their product directly to the production line of lithium-ion batteries. ADECON meets their expectations by building dedicated solutions. By working with agents worldwide, we can easily collect goods directly **from the factory ramps, ensuring a smooth and hassle-free process.** We organize sea freight to Europe and offer customs services, after which the raw material often goes to our depot or warehouse, where it is stored until it is ready to be in production. Here, **the raw material ends its journey, but the finished product, i.e. batteries,** also has to be sent on further. We arrange the export of goods to the farthest corners of the world, even to the door of the recipient, not only to the port in the destination.

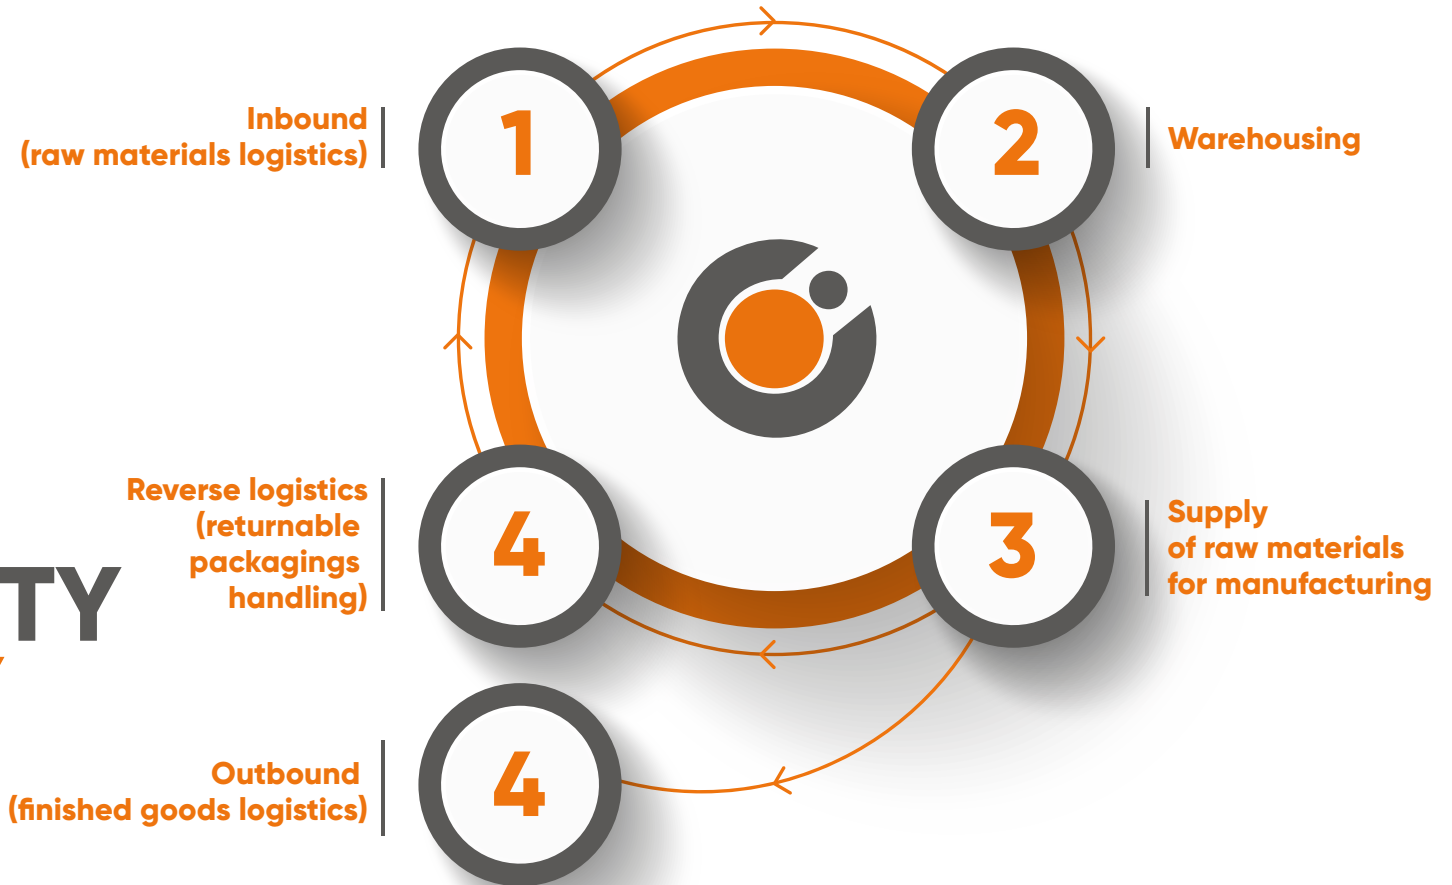

Frequently, following the utilization of the raw materials, we also possess particular vacant containers – like steel barrels or iso tanks – that need to be **transported back to Asia for their further use.** Such containers are usually returned uncleaned, and so from the IMDG regulations point of view, it is still a dangerous product at sea. And here the whole process comes full circle, because after appropriate cleaning and preparation, the containers are ready to hit the road with raw material or ready-made electrolyte again.

**Suppliers of electrolyte must ensure the continuity of deliveries** of their product to production in accordance with regulations and environmental protection standards. **ADECON has experience** in managing such supply chains, **guaranteeing timely and safe delivery of raw material and finished product around the world.**
